

Berekenbaarheid 2005, Uitwerking toets 4

1. Het schema van primitieve recursie is voor deze a :

$$\begin{array}{rcl} a(x, 0) & = & g(x) \\ a(x, y + 1) & = & h(x, y, a(x, y)) \end{array} \quad \begin{array}{rcl} & = & 1 \\ & = & x^{a(x, y)} \end{array}$$

Dus we vinden:

$$\begin{array}{rcl} g(x) & = & 1 \\ h(x, y, z) & = & x^z \\ g & = & c_1^{(1)} \\ & = & s \circ z \\ h & = & \exp \circ (p_1^{(3)}, p_3^{(3)}) \end{array}$$

- 2.

$$l(x) = \mu y \leq x. \text{lt}(x, 10^y)$$

- 3.

$$e(x, y) = \text{sg} \left(\sum_{i=1}^{\text{gdl}(y)} \text{eq}(x, \text{dec}(i - 1, y)) \right)$$
